

PISTON IN DOSING
POSITION

The pistons push out resin/hardener in correct mixing ratio.
The components are separate until the spiral mixer.

POTTING IN VACUUM CHAMBER: we use 2 or 3 mixers and dosage valve. When job is finished, we need to do the washing cycle with solvent.

POTTING NOT IN VACUUM CHAMBER: we can use n. 1 spiral mixer to avoid the washing cycle with solvent. When job is finished you have to remove the mixer and nothing else.
